LogarTech Ltd.
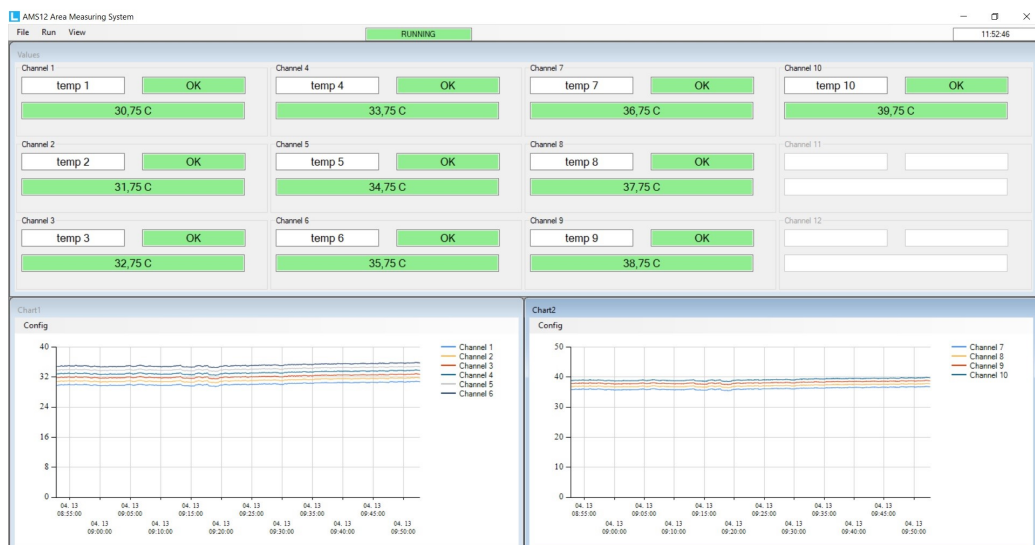

AMS12

AREA MEASURING SOFTWARE

The AMS12 software was designed for small area monitoring systems, but it can be used for other measuring systems with up to 12 devices or up to 12 measuring parameters as well.

The AMS12 software has 12 measuring channels, each of them independently configurable. It manages the data collection, the data processing and also handles the database. The user can follow the actual measuring values or can review any data from the database. The query interval of the AMS12 is 5 seconds.

System requirements:

- Win10
- PIII 1000 MHz or better
- At least 256 MB RAM
- At least 100 MB free disk space a HDD-n
- At least one COM port or USB serial converter
