LT-407

PROTOCOL CONVERTER

The LT-407 can be used as a protocol convert in case of many different devices.

It includes two RS-232/RS-485 serial ports and a microcontroller adapter device.

In many cases, different companies' measuring devices should be included into one complex measuring system. The different constructors' equipment in most of the cases use different communication protocol. The LT-407 protocol converter enables the integration of these devices into one, unified system.

Technical parameters:

- Area of operation: indoor
- Ambient temperature: -20°C - +50°C
- RS-232 or RS-485 interface (can be set with jumper)
- CE compliance
